## STATEMENT OF EVIDENCE

## North Quarter Corner Section 11, T114N-R45W

1871

L. Harrington was contracted by the United States Government Land Office to perform the Original Public Land Survey in this township. He records in his field notes "Set a post for 1/4 sec cor and raised mound as per instructions".

July 19, 2012

Duane A. Bonnema, Land Surveyor #14895 while doing a remonumentation survey for the Minnesota Department of Transportation, found a nail at the road surface. He dug a 3.7' deep hole that covered an area extending 5.0' north, 3.0' south, 6.0' east, and 4.0' west of the nail location. The top of the original topsoil was observed to be at a depth of 2.0' below the surface. At a depth of 2.0' he found an old iron that had been knocked over, the iron was lying horizontally and was so deteriorated that he could not tell if it was a pipe or a solid shaft. At a depth of 2.3' he found a 31/2" x 91/2" x 18" square cut quarried granite stone with traces of wood lying in the soil along the northwest corner of the stone. It appears that the iron was placed without knowing that the stone was nearby and below. A meeting was held with Lyle Moseng and Daniel Bueltel, (past and current Lyon County Surveyors) and at this meeting it was mutually agreed that the 31/2" x 91/2" x 18" square cut quarried granite stone appears to be the best available evidence of this Section Corner location. On December 12, 2012, a cast iron capped 2" square by 30" long iron telspar monument was placed at the surface at the position of the found 31/2" x 91/2" x 18" square cut quarried granite stone. The newly placed MNDOT telspar monument is located 5.23' south and 1.66' east of the nail found at the surface.
